Today's military units are taking advantage of cutting edge hand held technologies. From Android phones to I-pad tablets all these devices need recharging. Most charging solutions require vehicular 12Vdc or household 120vac power source, power sources that are not readily available to squads in the field. Adding new batteries to the supply stream is just not cost effective or smart

PKMM's Tru Capacity provides squads in the field with a small, light-weight, rugged and inexpensive device that allows soldiers to use their current radio batteries (BA-5590 family) as a power source. PKMM's Tru Capacity can recharge up to 4 handheld devices. With up to 5 amps of recharging power it can quickly recharge phones, tablets and many other handheld devices.

Specifications:

Size: 4.4"x2.5"x.1.5"

Input: 12 Vdc from any BA5590 and similar batteries

Output: 5vdc 5A from 4 USB type A
